Joomla Upgrade Features

For our upgrade services, we actually build a completely new Joomla 3.4 site and import all your content into it. We do this to eliminate any problems or "bugs" your current site has as well as make several upgrades. Also, because our company has developer licenses for many templates and components, you get several hundred dollars worth of extensions on your site.

Reasons to Hire a Professional

Troubleshooting/Fixing of all problems
Full testing of updated site
Ability to review/approve upgraded site before going live
ZERO downtime for existing website
Written Estimates, Invoice, and a Contracted deadline
